

Digital Platforms Business Model Analysis and Resources

*A resource for understanding and exploring the changing
landscape for financial inclusion in the platformization era*

Partnership for **FINANCE**
in a **DIGITAL AFRICA**

Contents

1 Introduction

Purpose of this document and suggestions for how the information might be useful

2 FiDA Platformization Lens

Introduction to a multidisciplinary approach to understanding tactics and partnership strategies employed by digital platforms and their linked implications for inclusion

3 Various Platforms Analyzed

Step-through examples of African platforms (and a few international examples) analyzed through the platformization lens

4 Conducting business model analysis using the lens

Guides for replicating business model analysis of digital transactional platforms to uncover economic and financial inclusion opportunities

1 Introduction

Purpose of this document and suggestions for how the information might be useful

Purpose of this guide

- This document highlights FiDA's methodology for investigating platform business models. It contains single slide views that illustrate how platform activities create opportunities for economic inclusion. It also contains a set of questions that organizations can use to conduct similar analysis on other platforms.
- FiDA hopes that this guide helps organizations:
 - Become more aware of platforms' activities and how they support economic inclusion
 - Increase specific knowledge of particular African case examples
 - View African platforms in potentially new ways—most importantly, how platforms' ability to foster economic and financial inclusion extends beyond just payments or transactional data flows (i.e. sales records)

Suggestions for using contents

- This document may be useful in the following ways:
 - Explore market functions (matching, facilitating transactions, enhancing credibility, analyzing data) of platforms that contribute to economic inclusion
 - Identify platform organizations to collaborate or partner with
 - Leverage the methodology to explore additional platform business models

2 FiDA Platformization Lens

Introduction to a multidisciplinary approach to understanding tactics and partnership strategies employed by digital platforms and their linked implications for inclusion

A lens to link platformization to financial & economic inclusion

The platformization lens helps researchers critically analyze digital platforms at the intersection of their business model and a transaction archetype (e.g., *E-Commerce, Asset Sharing, Global Online Work, Local Service, etc.*)

The result of this exercise is a set of **tactics** and **partnership strategies** employed by digital platform organizations with linked implications for development.

Innovation platforms

Infrastructure that can be extended or built upon by other firms

Examples:

Operating Systems
(iOS, Android, WinTel)

Ethereum

Facebook for Developers

Amazon Web Services

Open source payments infrastructure

Transaction platforms

Owner attracts different categories of users to the platform to complete a transaction; both/all sides benefit from increased participation (i.e., indirect network effects) while owner monetizes the activity.

Market functions

Transaction archetypes

(each with their own dynamics and impacts on society)

	 E-Commerce	 Global Online Work	 Local Services	 Asset Sharing	 Attention	 Data
Aggregation & distribution: gatekeeping, facilitating discovery, network effects, matching supply and demand						
Transaction facilitation: enabling exchanges, typically money for information, goods, or services						
Credibility enhancement: independently certifying qualifications or claims made by suppliers or consumers						
Information analysis & advice: collecting or analyzing information about suppliers or consumers						

Case studies applying the lens to financial inclusion

Some elements of Uber's business model have implications for financial and economic inclusion. This [case study](#) highlights Uber's insurance and lending partnerships, its standardization of on-demand ridesharing and meal delivery, its acceptance of cash and mobile money, and its credibility enhancement of drivers enabling them to be matched with new customers, among other important aspects of its business model.

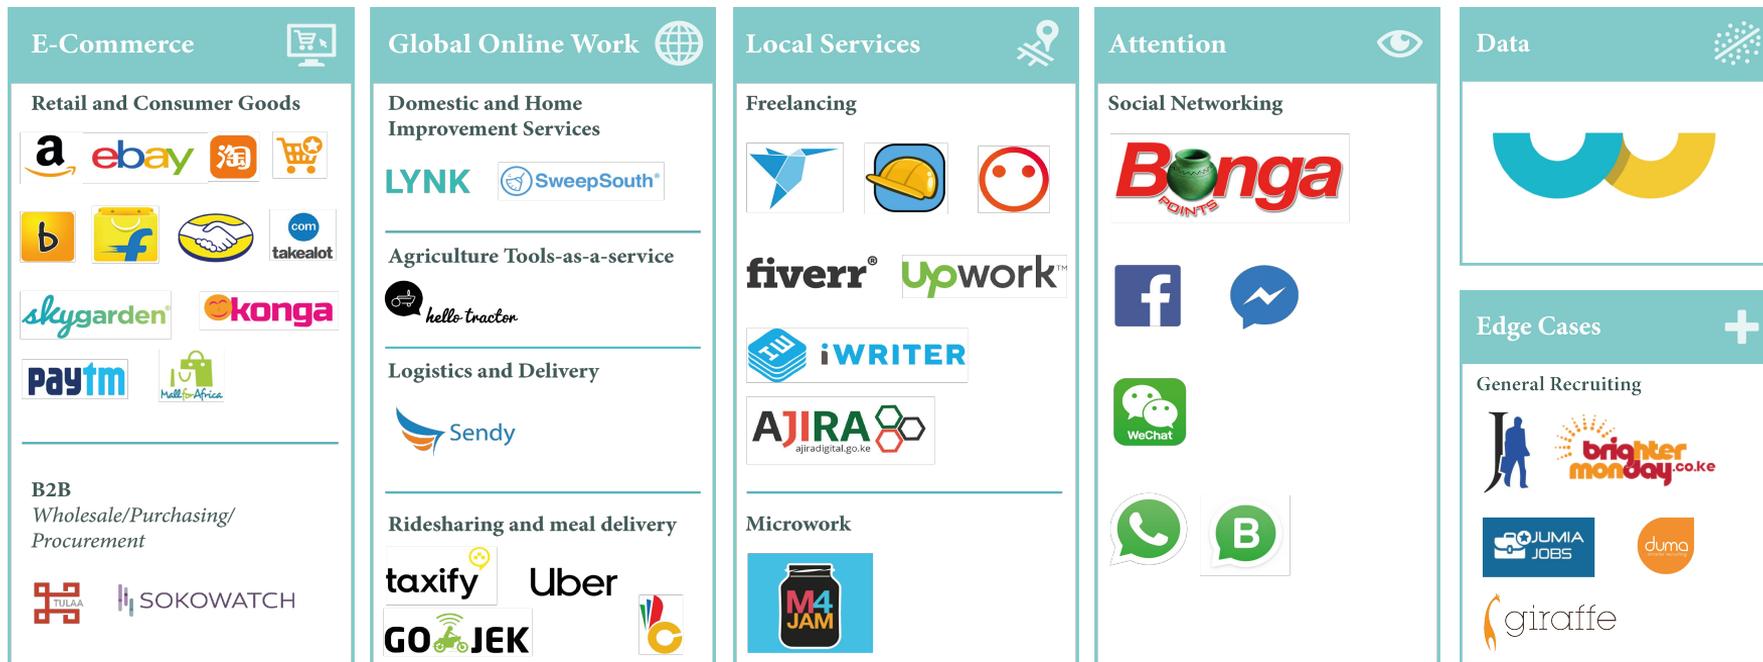

Elements of Upwork's business model have implications for financial and economic inclusion. This [case study](#) highlights Upwork's milestone-based payment option, its work with enterprises to disaggregate tasks, and its certification and verification processes, among other important aspects of its business model.

3 Various platforms analyzed

Step-through examples of African platforms (and a few international examples) analyzed through the platformization lens; examples detail observed tactics and strategies, and identify one or two possible directions that platforms could take in the future

3 Various transactional platforms analyzed

FiDA has profiled over **40** transactional platforms (*including edge cases*) applying our platformization lens to financial inclusion

10 Categories not exhaustive nor mutually exclusive; platforms may align with multiple categories. For analysis purposes platforms have been slotted into a category which suits an important aspect of their business model for consideration in the research

3 Various transactional platforms analyzed

Platform tactics and strategies impacting economic inclusion 1

Market Functions	Opportunities for Financial & Economic Inclusion	Transaction Archetypes				
		 E-Commerce	 Global Online Work	 Local Services	 Attention	 Data
Aggregation & distribution	Decrease matching and collections friction for financial services through partnerships with lenders and/or insurers	●	●	●	●	
	Expand trade rings geographically; facilitate discovery	●	●	●	●	
	Aggregate demand	●		●	●	●
	Disaggregate or distribute tasks		●	●		
	Leverage distributed network to offer financial services at "last mile"	●		●		
	Leverage network of agents or shops as aggregators/distributors for e-commerce	●				

3 Various transactional platforms analyzed

Platform tactics and strategies impacting economic inclusion 2

Market Functions	Opportunities for Financial & Economic Inclusion	Transaction Archetypes				
		 E-Commerce	 Global Online Work	 Local Services	 Attention	 Data
Transaction facilitation	Standardize transactions; transaction transparency	●	●	●	●	
	Reduce payments friction by using various forms of non-card digital payments	●	●	●	●	●
	Extend reach of marketplaces to unbanked by accepting cash or converting cash to digital easily	●		●		
	Provide banking functions/open bank accounts	●		●		
	Combine online and offline sales for vendors	●			●	
	Escrow/milestone payments	●	●	●		
	Agents facilitate online transactions on behalf of customers	●				
	Increases formal commerce activity by offering consumer lending	●				

3 Various transactional platforms analyzed

Platform tactics and strategies impacting economic inclusion 3

Market Functions	Opportunities for Financial & Economic Inclusion	Transaction Archetypes				
		 E-Commerce	 Global Online Work	 Local Services	 Attention	 Data
Credibility enhancement	Buyer/seller can meet face to face; an in-person agent enhances credibility for the service	●		●		
	Authenticate user				●	
	Certified profiles of platform participants	●	●	●	●	
	Leverage certified profiles to satisfy KYC	<i>piloting</i>		●		
	Ratings and review system	●	●	●		●
	Build trust via returns or recourse policy	●	●	●		
	Remove poor performers			●		
	Upskilling and skills certification, training	●	●	●		
	Copyright protection		●			
	Loyalty programs	●		●		

3 Various transactional platforms analyzed

Platform tactics and strategies impacting economic inclusion 4

Market Functions	Opportunities for Financial & Economic Inclusion	Transaction Archetypes				
		 E-Commerce	 Global Online Work	 Local Services	 Attention	 Data
Information analysis & advice	Credit scoring or underwriting risk analysis based on reviews, patterns, sales histories, GPS, and other data	●	●	●	●	●
	Leverage data for customer segmentation, sold via other products	●	●			
	Leverage data for systems reporting to government or other institution			●	●	●
	Leverage data for location-specific reporting of information				●	
	Integration of data cross-platforms			●		
	Analytics for platform participants, sometimes linked to advice/guidance	●		●		
	Reduce fraud in real time	●				

Platform Profiles

E-Commerce:

Online marketplaces where third parties sell goods to consumers (Retail) or businesses (wholesale/purchasing/procurement); all transactions are processed through the website host

Categories profiled include:

- *Retail*
- *Wholesale/purchasing/procurement*

**These profiles reflect publicly available information from company websites, news articles, and blog posts as of 2018.
Please contact FiDA with any updated company details.*

Amazon Marketplace (Parent Org.: Amazon.com, Inc.)

Region: Global, including US, Germany, UK, Japan. Recent launch in India

Core Business: marketplace matching Amazon sourced and third-party seller products with business and household consumers; logistics viewed as core business (e.g., services provided to third parties which Amazon collects revenues from)

Secondary: In addition to AWS, advertising services; subscriptions to digital content and to Amazon Prime; financial services

Market functions Financial & Economic Inclusion Analysis

Sources:
[Crunchbase](#),
[2017 Annual report](#),
[CB Insights](#),
[CNBC](#),
[Nerdwallet](#), and
FiDA analysis.

Aggregation & distribution

Observed:

- Decrease matching friction for financial services through partnerships with lenders and insurance investment (Acko)
- Expand trade rings geographically for merchants

Transaction facilitation

Observed:

- Reduce payments friction via Amazon Pay, which includes a digital wallet for customers, a payments network for both online and brick-and-mortar merchants; in India, Amazon has introduced the ToneTag Platform, contactless payments HW/SW integrated at merchant and consumer interaction points (integrated into Amazon Pay)
- Extend reach of online marketplace to unbanked through Amazon Cash, which allows customers to deposit cash into a digital account by showing a barcode at partner brick-and-mortar retailers with high traffic/large footprint (CVS, 7-11, coinstar); in India this is "Doorstep" a cash pickup service which allows customers to load money into Amazon Pay digital wallets

Credibility enhancement

Observed:

- Build trust via returns/recourse policy

Potential:

- Satisfy KYC and reduce fraud via certified profiles of buyers/sellers on the platform that don't have bank accounts, linked to the Amazon wallet

Information analysis & advice

Observed:

- Infer character/willingness to pay by reviewing ratings, consumption patterns, and other data
- Confirm seller ability to pay for merchant lending facilities (underwritten by BofA) based on sales history; in India, lending facilities partnered with Bank of Baroda

ebay eBay Africa marketplace platform

Region: Global, with top countries including Nigeria, Kenya, Ghana, South Africa, Burundi

Core Business: marketplace matching sellers with buyers; revenues earned through seller services (various fees)

Secondary: StubHub (ticketing), classified properties

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution	<p>Observed:</p> <ul style="list-style-type: none">- Decrease matching friction between buying/selling of African made artisan products- Increase income opportunities for African merchants by expanding trade rings geographically
Transaction facilitation	<p><i>Potential:</i></p> <ul style="list-style-type: none">- <i>Extend reach and reduce payments friction via integration with mobile wallets (for sellers)—currently requires sellers to accept EFT, PayPal, Western Union or MallForAfrica Webcard</i>
Credibility enhancement	<p><i>Potential:</i></p> <ul style="list-style-type: none">- <i>Satisfy KYC for sellers on the platform</i>
Information analysis & advice	<p><i>Potential:</i></p> <ul style="list-style-type: none">- <i>Confirm seller ability to pay and offer merchant lending facilities based on sales history and projections</i>- <i>Infer character/willingness to pay by calculating a score based on platform behavior and/or reviewing ratings</i>

ebavinc.com, and
FiDA analysis.

Taobao (Parent Org.: Alibaba)

Region: China, some sellers ship elsewhere in Asia

Core Business: e-commerce website for transactions between consumers and small businesses and individual entrepreneurs in China

Secondary: Taobao Data Cube & Tao Ci (aggregate transactions data for industry trend insights); Taohua (digital entertainment platform)

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution

Observed:

- Increase income opportunities for small merchants and micro-entrepreneurs by expanding trade rings geographically; facilitate discovery
- Decrease matching friction for complementary financial services (e.g., loans from sister company, Ant Financial)
- Leverage a distributed network to offer financial services at the last mile, through rural division, Cuntao

Transaction facilitation

Observed:

- Reduce payments friction through Alipay wallet, integrated with all banks
- Build trust and increase formal commerce activity through escrow services which evolved into a popular product, Alipay
- Increases commerce activity on the platform by offering consumer lending (e.g., virtual credit card for payment in installments) and off the platform by leveraging transaction data to offer consumer credit products through sister company, Ant Financial
- Increases formal commerce activity by accepting cash payments from offline customers via Cuntao program

Credibility enhancement

Observed:

- Validate claims on quality or performance via a ratings and review system

Potential:

- *Reduce fraud via certified profiles of buyers/sellers on the platform*

Information analysis & advice

Observed:

- Leverages transaction data to offer lending facilities from sister company, Ant Financial
- Factors buyer behavior and reviews into internal “credit score” for lending
- Leverages data for customer segmentation information, which it sells in aggregate via Data Cube and Tao Ci
- Leverage transaction data to increase work counted as “formal” services in the economy
- Extend revenue data to sister company, Ant Financial, for financial services

Sources:
Alibaba Group website, World Bank (1) and (2), and FiDA analysis.

Flipkart (Parent Org.: Walmart)

Region: India

Core Business: marketplace connecting sellers with buyers; revenues earned through commissions, shipping fees, collection fees, and "fixed fee" flipkart charges

Secondary: consumer lending, vendor lending, insurance

Market functions Financial & Economic Inclusion Analysis

Sources:
[Crunchbase](#),
[India Times](#),
[Business Standard](#),
and FiDA analysis.

Aggregation & distribution

Observed:

- Decrease matching friction for financial services (Growth Capital and Cardless Services; also insurance)
- Expand trade rings geographically for Indian merchants
- Use small shops as aggregators/distributors for e-commerce

Transaction facilitation

Observed:

- Standardize retail transactions in India
- Build trust and increase formal commerce activity through cash on delivery payments
- Reduce payments friction via PhonePe, EMI payment options, Buy Now Pay Later

Credibility enhancement

Observed:

- Reduce fraud via "Flipkart Seal of Quality and Speed"
- Build trust via returns/recourse policy

Potential:

- *Satisfy KYC for buyers or sellers—currently testing video KYC*

Information analysis & advice

Observed:

- Leverage transactions and character data to lend directly or through third parties

PayTM (Parent Org.: One97 Communication)

Region: India

Core Business: marketplace and virtual bank; revenues primarily through fees and commissions

Market functions Financial & Economic Inclusion Analysis

<p>Aggregation & distribution</p>	<p>Observed:</p> <ul style="list-style-type: none"> - Expand trade rings geographically for Indian merchants
<p>Transaction facilitation</p>	<p>Observed:</p> <ul style="list-style-type: none"> - Standardize retail transactions in India - Extend reach and reduce payments friction via an integrated digital wallet - Increase formal commerce activity through COD which builds consumer trust in conducting business at a distance - Aggregate offline with online sales for vendors (such as Samsung) based on new QR codes at bricks and mortar
<p>Credibility enhancement</p>	<p><i>Potential:</i></p> <ul style="list-style-type: none"> - Satisfy KYC for buyers who pay cash on delivery via certified profile on the platform
<p>Information analysis & advice</p>	<p>Observed:</p> <ul style="list-style-type: none"> - Confirm customer ability to pay for instant short term credit (ICICI bank); payment behavior used as part of criteria - Infer customer ability and willingness to pay "using a combination of financial and digital parameters to sanction the credit line instantly" - In partnership with Lendingkart infer seller ability and willingness to pay using "big data" analytics and other proxies - Reduce fraud via realtime evaluation of every transaction for fraud (Paytm labs) <p><i>Potential:</i></p> <ul style="list-style-type: none"> - Infer underwriting risk for insurance based on platform behavior

Jumia

Region: Africa, 14 countries including Nigeria and Kenya

Core Business: marketplace connecting sellers of products and services with consumers; “instant delivery”

Secondary: logistics and payments services support marketplace; financial services for sellers (working capital loans) to increase engagement with Jumia; plans to offer consumer finance linked to Jumia Pay

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution

Observed:

- Decrease matching friction (and collections friction) for small merchant lending
- Expand trade rings geographically for African merchants

Potential:

- *Exploring using high traffic locations as aggregators/distributors for e-commerce*

Transaction facilitation

Observed:

- Standardize retail transactions in Africa
- Reduce payments friction using Jumia Pay
- Build trust and increase formal commerce activity through "SafePay Escrow" and COD payment options
- JForce agents facilitate online transactions for buyers

Potential:

- *Extend reach and reduce payments friction via integration with mobile wallets (for sellers) in more countries*

Credibility enhancement

Potential:

- *Satisfy KYC for buyers who pay cash on delivery via certified profile on the platform*

Information analysis & advice

Observed:

- Credit scoring engine enabling third parties to lend to Jumia’s merchants

Potential:

- *Leverage cash on delivery transactions in consumer finance credit scoring*

Sources:
[Dignited.com](#),
[TechCrunch](#),
Jumia website, and
FiDA analysis.

Mercado Libre

Region: Region: 18 countries in Latin America, with leading countries Mexico, Argentina, and Brazil

Core Business: online marketplace connecting sellers of products with consumers

Secondary: advertising; classified listing service for motor vehicles, real estate, and services; Mercado Pago (fintech services for buyers and sellers; credit solution for buyers and sellers; asset management product; logistics solutions with fulfilment and warehouse services; virtual storefronts; and Cross Border Trade program enabling international merchants to sell through LatAm)

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution

Observed:

- Decrease matching friction (and collections friction) for small merchants
- Expand trade rings geographically, at a reduced cost
- Use small shops as aggregators/distributors for e-commerce

Transaction facilitation

Observed:

- Multiple online and offline payment options
- Build trust and accessibility through offline cash payment options and payment in installments
- Reduce payments friction via MercadoPay

Credibility enhancement

Observed:

- Loyalty program for customers and rating system for sellers

Potential:

- satisfy KYC

Information analysis & advice

Observed:

- Credit scoring engine enabling them to offer their own credit products for sellers and consumers
- Training, upskilling, and detailed “help” centre providing detailed guidance and advice

Sources:

[Bloomberg](#), [iProUp](#)

[Ambito.com](#),

Mercado Libre

website, and

FiDA analysis.

Sky.Garden

Region: Africa, primarily Kenya

Core Business: mobile focused marketplace matching sellers and buyers; revenues earned through commission on every transaction; logistics and order fulfillment to the customer

Secondary: operating its own logistics network

Market functions Financial & Economic Inclusion Analysis

Sources:
[Crunchbase](#),
[Disrupt Africa](#),
[TechMoran](#), and
FiDA analysis.

Aggregation & distribution	Observed: - Expand trade rings geographically for African merchants
Transaction facilitation	Observed: - Standardize retail transactions in Africa - Extend reach and reduce payments friction via integration with mobile wallets - Build trust and increase formal commerce activity through Sky.Garden escrow
Credibility enhancement	<i>Potential:</i> - Satisfy KYC for sellers via certified profile on the platform
Information analysis & advice	Observed: - Analyze revenue potential for sellers by providing analytics on price <i>Potential:</i> - Credit scoring based on buyer or seller ratings and/or seller turnover

BidorBuy

Region: Africa, with top countries including South Africa and Lesotho

Core Business: fixed price or auction format marketplace to buy and sell virtually anything online; revenues earned via commissions on every transaction

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution	Observed: - Expand trade rings geographically for African merchants
Transaction facilitation	Observed: - Standardize auction transactions in Africa
Credibility enhancement	Observed: - Satisfy KYC and reduce fraud via certified profiles on platform - Increase formal commerce activity through 100% coverage if something goes wrong with transaction
Information analysis & advice	<i>Potential:</i> - <i>Credit scoring based on buyer or seller ratings and/or seller turnover</i>

Sources:
[Crunchbase](#) and
FiDA analysis.

Konga (Parent Org.: Zinox Technologies)

Region: Africa, primarily Nigeria

Core Business: e-commerce marketplace

Secondary: KongaPay

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution	<p>Observed:</p> <ul style="list-style-type: none"> - Leverage a distributed network of merchants on "Konga" platform to offer financial services to merchant's customers through KongaPay platform, leveraging Red Cloud technology which allows banking services (payments, billpay, etc.) to be extended to merchant's customers - Expand trade rings geographically for African merchants
Transaction facilitation	<p>Observed:</p> <ul style="list-style-type: none"> - Standardize retail transactions in Africa
Credibility enhancement	<p>Observed:</p> <ul style="list-style-type: none"> - Increase formal commerce activity through guaranteed and instant refunds <p><i>Potential:</i></p> <ul style="list-style-type: none"> - Satisfy KYC and reduce fraud via certified profiles of shopkeepers on the platform
Information analysis & advice	<p><i>Potential:</i></p> <ul style="list-style-type: none"> - Credit scoring based on buyer or seller ratings and/or seller turnover

analysis.

takealot

Takealot (Parent Org.: Naspers)

Region: Africa, with top country South Africa

Core Business: marketplace matching buyers and sellers of products across diverse categories; revenues earned account fees and commissions

Secondary: Mr. Delivery last-mile delivery business

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution	Observed: - Expand trade rings geographically for South African sellers
Transaction facilitation	Observed: - Standardize retail transactions in Africa
Credibility enhancement	Observed: - Increase formal commerce activity through flexible returns policy and coverage for credit card fraud, which increases consumer trust in conducting business at a distance
Information analysis & advice	<i>Potential:</i> - Credit scoring based on buyer or seller ratings and/or seller turnover

Sources:
[Crunchbase](#) and
FiDA analysis.

Tulaa (Parent Org.: Esoko)

Region: Africa, with top countries including Ghana and Kenya

Core Business: agricultural marketplace enabling farmers to save and borrow to purchase inputs, receive tailored agronomic advice, and market their crops

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution	Observed: <ul style="list-style-type: none">- Aggregating demand for inputs among smallholder farmers- Aggregate demand for commodities by aggregating grains, etc.
Transaction facilitation	Observed: <ul style="list-style-type: none">- Reduce payments friction via integration with mobile money- Decrease cost volatility for farmers by allowing laybuy of inputs
Credibility enhancement	<i>Potential:</i> <ul style="list-style-type: none">- Satisfy KYC and reduce fraud via certified profiles on the platform
Information analysis & advice	<i>Potential:</i> <ul style="list-style-type: none">- Credit scoring based on buyer or seller ratings and/or seller turnover

Sources:
[Agfunder News](#),
[Crunchbase](#),
[Crunchbase](#),
and FiDA analysis.

Sokowatch

Region: Africa, with top countries including Kenya and Tanzania

Core Business: Marketplace for informal retailers in urban areas to order/receive free same-day delivery of products via SMS or mobile app; revenues earned through distribution agreements with manufacturers and mark-up on products

Secondary: Revolving credit to shopkeepers; capital loans; insurance

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution	<p>Observed:</p> <ul style="list-style-type: none"> - Decrease income volatility for merchants by reducing stockouts - Lower cost of goods sold by aggregating demand among shopkeepers to be able to better match with supplier bulk quantities without having to keep large quantities of stock on hand
Transaction facilitation	<p>Observed:</p> <ul style="list-style-type: none"> - Standardize shopkeeper store order transactions
Credibility enhancement	<p><i>Potential:</i></p> <ul style="list-style-type: none"> - Satisfy KYC and reduce fraud via certified profiles of shopkeepers on the platform
Information analysis & advice	<p>Observed:</p> <ul style="list-style-type: none"> - Shopkeeper/customer segmentation and revenue potential from market research—Sokowatch provides GPS coordinates of shops and tracks of store orders and feeds this information back to manufacturers - Infer ability to pay (revolving and capital loans) via indirect visibility to turnover through inventory (store orders) <p><i>Potential:</i></p> <ul style="list-style-type: none"> - Analyze risk for insurance premiums based on GPS location of shop among other data points

 and FiDA analysis.

Platform Profiles

Asset Sharing:

Peer-to-peer exchanges in various categories (transportation, accommodation, tools, etc.)

No companies profiled

Platform Profiles

Global Online Work:

Contracting of workers or providers to supply knowledge services or perform tasks via Internet-based marketplaces

Categories profiled include:

- *Online freelancing*
- *Microwork*

**These profiles reflect publicly available information from company websites, news articles, and blog posts as of 2018.
Please contact FiDA with any updated company details.*

Kuhustle

Region: Africa, with Kenya as priority

Core Business: Marketplace connecting skilled freelancers with assignments; revenues earned through "micro-tendering"—employers can post for free and freelancers pay small amount to bid (Kuhustle credits) \$10

Market functions Financial & Economic Inclusion Analysis

Sources:

[Tech Money Mama](#),

Kuhustle website,

and FiDA analysis.

Aggregation & distribution

Observed:

- Expand trade rings geographically for African freelancers
- Facilitate discovery through micro tendering process

Potential:

- Decrease matching and collections friction for financial services offerings that complement freelance work situations, such as wealth management/retirement planning, insurance (health, workers), etc.

Transaction facilitation

Observed:

- Reduce payments friction via integration with mobile money
- Build trust and increase formal commerce activity through escrow payment options

Credibility enhancement

Potential:

- Satisfy KYC and reduce fraud via certified profiles on platforms

Information analysis & advice

Observed:

Provide customer segmentation (and potentially earn revenue) via market research about freelancers on platform

Potential:

- Credit scoring based on freelancer ratings and turnover

Core Business: marketplace for online work run by the Kenyan government

Secondary: tools, training and mentorship needed for young people to work and earn an income online

Market functions Financial & Economic Inclusion Analysis

Sources:
[Crunchbase](#),
[Capital FM](#),
[KEPSA](#),
Ajira Digital
website, and FiDA
analysis.

Aggregation & distribution	<p>Observed:</p> <ul style="list-style-type: none"> - Expand trade rings geographically for African youth seeking employment
Transaction facilitation	<p>Observed:</p> <ul style="list-style-type: none"> - Extend reach and reduce payments friction via integration with payments intermediaries that integrate with M-Pesa or Equity Bank (Skrill, PayPal)
Credibility enhancement	<p>Observed:</p> <ul style="list-style-type: none"> - Upskilling through training offered on platform <p><i>Potential:</i></p> <ul style="list-style-type: none"> - Satisfy KYC and reduce fraud via certified profiles on platforms
Information analysis & advice	<p>None identified</p>

Upwork

Region: Global, with top countries including US, India, Philippines, Indonesia

Core Business: marketplace connecting freelancers with work assignments; revenues earned through transaction fees; premium assistance with recruitment and talent matching

Secondary: payroll services

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution

Observed:

- Decreases slack and matching friction by disaggregating demand for tasks that can be performed with access to a computer. Works with enterprises to do this
- Expand trade rings geographically for freelancers

Potential:

- Decrease matching and collections friction for financial services offerings that complement freelance work situations, such as wealth management and retirement planning, insurance (health, workers), etc.

Transaction facilitation

Observed:

- Build trust and increase formal employment activities through escrow/milestone-based payment

Credibility enhancement

Observed:

- Reduce fraud via skills tests and certifications on the system
- Reduce fraud via "Upwork Pro" qualifying freelancers (which are then verified)
- Build trust through recourse process

Information analysis & advice

Potential:

- Credit scoring based on freelancer ratings and turnover

Sources:
[Forbes](#),
[Upwork website](#),
and FiDA analysis.

Fiverr

Region: Global, with top countries including US, India, and Pakistan

Core Business: marketplace connecting freelancers with digital services work; revenues earned through commissions—listing gigs and services is free and costs nothing from the seller

Secondary: invoicing software (AND CO acquisition)

Market functions Financial & Economic Inclusion Analysis

Sources:
[Alexa](#),
[Fangalbert.com](#),
 Fiverr website, and
 FiDA analysis.

<p>Aggregation & distribution</p>	<p>Observed: - Expand trade rings geographically for freelancers</p> <p><i>Potential:</i> - Decrease matching and collections friction for financial services offerings that complement freelance work situations, such as wealth management and retirement planning, insurance (health, workers), etc.</p>
<p>Transaction facilitation</p>	<p>None Identified</p>
<p>Credibility enhancement</p>	<p>Observed: - Reduce fraud via "Pro verified" application and verification process: - Build trust through resolution center which offers recourse</p>
<p>Information analysis & advice</p>	<p>Observed: - Infer character by calculating a score (Fiverr Level) based on ratings, performance, quality, and other factors</p> <p><i>Potential:</i> - Credit scoring based on freelancer Fiverr Level scores and turnover</p>

Freelancer

Region: Global, with top countries including India, US, Bangladesh, Japan, and Pakistan

Core Business: freelancing, outsourcing, and crowdsourcing marketplace; revenues earned through subscription packages, commissions and fees, including optional *upgrades* (such as featured, urgent, full time placements, recruiter assistance, NDA, IP agreements, contests, sponsoring bids, etc.)

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution	<p>Observed:</p> <ul style="list-style-type: none"> - Expand trade rings geographically for freelancers <p><i>Potential:</i></p> <ul style="list-style-type: none"> - Decrease matching and collections friction for financial services offerings that complement freelance work situations, such as wealth management and retirement planning, insurance (health, workers), etc.
Transaction facilitation	<p>Observed:</p> <ul style="list-style-type: none"> - Build trust and increase formal employment activities through milestone payments

PeoplePerHour

Region: Global, with top countries including India US, UK, Pakistan, and Bangladesh

Core Business: marketplace connecting small businesses and freelancers; revenues earned through commissions and fees, including payments processing, featuring jobs as "urgent", extras to "help sellers win more work"

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution

Observed:

- Expand trade rings geographically for freelancers

Potential:

- Decrease matching and collections friction for financial services offerings that complement freelance work situations, such as wealth management and retirement planning, insurance (health, workers), etc.

Transaction facilitation

Observed:

- Build trust and increase formal employment activities through escrow solution enabling money to be held in escrow until job is completed

Credibility enhancement

Observed:

- Build trust through copyright protection

Information analysis & advice

Potential:

- Credit scoring based on freelancer ratings/reviews and turnover

Sources:
PeoplePerHour
website and FiDA
analysis.

IWriter

Region: Global, with top countries including India, US, Kenya, Nigeria, and South Africa

Core Business: marketplace for content writers and requesters; revenues earned as buyers pay per word—rates vary according to writer's profile (standard, premium, elite, elite plus)

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution	<p>Observed:</p> <ul style="list-style-type: none">- Expand trade rings geographically for freelance writers <p><i>Potential:</i></p> <ul style="list-style-type: none">- Decrease matching and collections friction for financial services offerings that complement freelance work situations, such as wealth management and retirement planning, insurance (health, workers), etc.
Transaction facilitation	<p>Observed:</p> <ul style="list-style-type: none">- Standardize rates and transactions for online content freelancing
Credibility enhancement	<p>Observed</p> <ul style="list-style-type: none">- Build trust through review process which allows requestor 3 days to review and approve/reject
Information analysis & advice	<p><i>Potential:</i></p> <ul style="list-style-type: none">- Credit scoring based on freelancer reviews and turnover

FiDA analysis.

Money for Jam (Parent Org.: Informal Solutions)

Region: Africa, primarily focused on South Africa

Core Business: micro-jobbing platform connecting brands with jobbers who complete jobs using mobile devices; revenues also earned through crowdsourced research, merchandising, geo-locational data, mystery shopping, incentivized purchase, brand activation

Secondary: learning and training

Market functions Financial & Economic Inclusion Analysis

Sources:
[IT News Africa](#),
[Crunchbase](#),
M4Jam website, and
FiDA analysis.

Aggregation & distribution	Observed: <ul style="list-style-type: none">- Decreases slack and matching friction by crowdsourcing jobbers who perform tasks- Increase income opportunities for online jobbers by expanding trade rings beyond personal and business networks
Transaction facilitation	Observed: <ul style="list-style-type: none">- Reduce payments friction via integration with their own digital wallet which is integrated with Airtime vendors and other VAS providers enabling jobbers to easily spend what they earn
Credibility enhancement	<i>Potential:</i> <ul style="list-style-type: none">- Satisfy KYC and reduce fraud via certified profiles on platforms
Information analysis & advice	Observed: <ul style="list-style-type: none">- Provide customer segmentation (and potentially earn revenue) via market research about jobbers on platform <i>Potential:</i> <ul style="list-style-type: none">- Credit scoring based on freelancer ratings and turnover

Platform Profiles

Local Services:

Connecting buyers and local service providers that previously transacted offline; includes “as-a-service” business models where an asset is being used in a consumption-based service model distinct from a peer-to-peer exchange

Categories profiled include:

- *Domestic services*
- *Agricultural tools-as-a-service*
- *Logistics and delivery*
- *Ridesharing and meal delivery*

**These profiles reflect publicly available information from company websites, news articles, and blog posts as of 2018. Please contact FiDA with any updated company details.*

Lynk

Region: Kenya (Nairobi and surrounding areas)

Core Business: online job matching platform for artisans to promote and showcase their products and services

Secondary: tools and material wholesaling, managed maintenance contracts; connecting workers with training, apprenticeships, and financial services

Market functions Financial & Economic Inclusion Analysis

Sources:
[Crunchbase](#),
[Disrupt Africa](#),
 Lynk website, and
 FiDA analysis.

Aggregation & distribution

Observed:

- Exploring decreasing matching friction for financial services (for Pros) and worker benefits aligned to freelance situations
- Expand trade rings geographically for Pros; facilitate discovery
- Disaggregate chunks of work into smaller tasks, enhancing income earning opportunities

Transaction facilitation

Observed:

- Standardize payments and reduce friction around getting paid for home services workers
- Reduces payments friction for workers since payouts happen through mobile money
- Enhance trust via milestone payment options (withholding payments to workers for 24 hours after job completion)

Potential:

- *Standardize informal worker job scope of work and transactions*

Credibility enhancement

Observed:

- Satisfy KYC—particularly employment history—via certified profiles on the platform e.g., reference checks
- Enhance credibility of workers by offering certifications (badges) for certain skills and verifying skills of workers (screen, test, and interviews) and reference checks for full time matches (nannies, housekeepers, drivers, cooks)
- Enhance trust via recourse for unsatisfied customer recourse, including warranties for some products, for unsatisfied customers
- Removal of poor performers from the site
- Training for all in Lynk Quality Standards

Information analysis & advice

Observed:

- Leverage transactions and character data to lend directly or through third parties

SweepSouth

Region: Africa, primarily in South Africa

Core Business: commissions on cleaning services purchased via the platform

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution

Observed:

- Expands trade rings for service professionals beyond established contacts and networks; facilitate discovery
- Decreases matching friction for insurance—partnership with Simply to provide accidental death and disability cover at no cost to all SweepSouth domestic cleaners

Transaction facilitation

Observed:

- Standardize payments and reduce friction around getting paid for home services workers

Credibility enhancement

Observed:

- Satisfy KYC through background checking and interviews
- In-house training
- 100% guarantee and support team on standby to address any issues

Information analysis & advice

Potential:

- *Leverage transactions and character data to lend directly or through third parties*

Sources:
SweepSouth
website, [Simply](#), and
FiDA analysis.

Hello Tractor

Region: Africa and South Asia

Core Business: platform for tractor fleet maintenance and on-demand services

Secondary: A lending channel financing tractor purchases and maintenance services for farmers on the Hello Tractor platform

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution	Observed: <ul style="list-style-type: none">- Expand tractor services beyond initial communities and aggregates tractor service demand- Decrease matching friction for tractor owners and farmers who need tractor services for timelier services
Transaction facilitation	Observed: <ul style="list-style-type: none">- Standardize transactions for farm equipment hire- Price for services is set by the tractor owner and paid per hectare with a booking agent serving as facilitator for the transaction
Credibility enhancement	Observed: <ul style="list-style-type: none">- Booking agents used as a credibility enhancer for the service, playing a role as an educator about the benefits of mechanized farming
Information analysis & advice	Observed: <ul style="list-style-type: none">- Owner app has information on location, fuel, active engine hours to help monitor the tractor- Daily activity reports for each tractor to help utilization rates and operations

Sources:
HelloTractor
website and FiDA
analysis.

Sendy

Region: Africa, primarily in Kenya

Core Business: connecting customers (B2C, B2B) with logistics providers (motorbike, truck)

Secondary: possibly delivery route optimization; possibly outsourced fleet management

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution	<p>Observed:</p> <ul style="list-style-type: none">- Decrease slack and matching friction for trucks by aggregating and disaggregating demand for logistics; reduce idle time for fleet vehicles- Expand trade rings geographically for motorbike drivers by expanding trade rings geographically, industry sector, network, etc.
Transaction facilitation	<p>Observed:</p> <ul style="list-style-type: none">- Standardize informal delivery driver transactions- Reduce payments friction via M-Pesa integration- Increase formal commerce activity through on-delivery payment options
Credibility enhancement	<p><i>Potential:</i></p> <ul style="list-style-type: none">- <i>Satisfy KYC and reduce fraud via Sendy certified profiles of motorbike drivers</i>
Information analysis & advice	<p><i>Potential:</i></p> <ul style="list-style-type: none">- <i>Infer insurance risk by calculating a score based on platform driving behavior, use, and location of an asset</i>- <i>Credit scoring based on driver ratings and turnover</i>- <i>Derive traffic, popular routings, and congestion information for government planning</i>

Sources:
[Crunchbase](#),
[Angel List](#),
Sendy website, and
FiDA analysis.

Little Cab (Parent Org.: Craft Silicon)

Website: <https://www.little.bz/ke/>

Core Business: ridehailing platform

Secondary: M-Pesa agent transactions

Market functions **Financial & Economic Inclusion Analysis**

Sources:
[Business Daily Africa](#), Little Cab website, and FiDA analysis.

Aggregation & distribution

Observed:

- Leverage distributed network to offer financial services at the "last mile"—drivers are all registered Safaricom agents
- Expand trade rings for drivers beyond their immediate network

Potential:

- *Decrease matching friction (and collections friction) for affordable insurance, vehicle finance, smartphone finance, and other financial services*

Transaction facilitation

Observed:

- Standardize informal transportation provider transactions
- Extend reach and reduce payments friction via integration with mobile money and acceptance of cash

Credibility enhancement

Potential:

- *Satisfy KYC and reduce fraud via certified profiles on the platform*

Information analysis & advice

Potential:

- *Infer underwriting risk for insurance based on driver behavior*
- *Credit scoring based on driver ratings and turnover*
- *Derive traffic, popular routings, and congestion information for government planning*

Taxify

Region: Global, with top countries in Africa including Nigeria, South Africa, Tanzania, Uganda, and Kenya

Core Business: ridesharing platform

Secondary: web-based dispatch software

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution

Observed:

- Decrease slack and matching friction for rides
- Facilitate matching for complementary financial services by sourcing an insurance scheme for its drivers

Transaction facilitation

Observed:

- Standardize informal transportation provider transactions
- Extend reach and reduce payments friction via integration with mobile money and acceptance of cash (in the ride-hailing space, card payments are frictionless for rider but creates a lot of friction for drivers who only get paid weekly)

Credibility enhancement

Potential:

- *Satisfy KYC and reduce fraud via independently certified profiles on platforms (identity information is captured)*

Information analysis & advice

Potential:

- *Credit scoring based on driver ratings and turnover*
- *Infer underwriting risk for insurance based on driver behavior and ratings*
- *Derive traffic, popular routings, and congestion information for government planning*

Sources:
[Crunchbase](#),
[Quartz Africa](#),
Taxify website, and
FiDA analysis.

Uber

Region: Global, with top countries in Africa including South Africa, Kenya, Ghana, and Nigeria

Core Business: marketplace for ridesharing and food delivery

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution

Observed:

- Decreases slack and matching friction by linking drivers and riders, facilitating discovery
- Strong network effects increase earning opportunities for drivers and expand trade rings beyond a driver's own network
- Aggregates rider demand thru Uber Pool, thereby making rides more affordable and increasing demand for driver services
- Decreases matching friction (and collections friction in some countries) for complementary financial services, such as rider insurance coverage; benefits on credit cards; loans and leasing arrangements for drivers (only in some locations)

Transaction facilitation

Observed:

- Standardize informal transportation provider transactions, including quality standards and transparent pricing
- Extend reach and reduce payments friction by acceptance of cash

Potential:

- *Further reduce payments friction by directly integrating M-Pesa as a payment method (may not be possible given Safaricom operates a competitor)*

Credibility enhancement

Observed:

- Independently verifies drivers' identity documents, driver's licenses, and other required information
- Recourse for unhappy customers

Potential:

- *Could enhance credibility of workers by upskilling, driving courses, and certifications*

Information analysis & advice

Observed:

- Leverages platform behavior and reviews/ratings of workers to screen driver-partners for access to loans to buy or lease cars
- Leverages transaction data to offer lending facilities to workers; confirms ability to pay through transactions flowing through its platform and willingness via ratings—for loans for cars to use for Uber only
- Provide urban transportation information to municipalities

website, and FiDA analysis.

Safe Boda

Region: Africa, primarily Uganda and Kenya

Core Business: marketplace for safe transportation matching riders with drivers

Secondary: wallet, payments system, and FinTech services

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution	Observed: <ul style="list-style-type: none">- Decreases slack and matching friction by linking drivers and riders, facilitating discovery- Decreases matching friction (and collections friction) for complementary financial services, such as medical and accident insurance
Transaction facilitation	Observed: <ul style="list-style-type: none">- Standardize informal transportation provider transactions, including safety standards and transparent pricing- Reduce payments friction through prepaid wallets that enable cashless rides and acceptance of mobile money
Credibility enhancement	Observed: <ul style="list-style-type: none">- KYC for loan products (already with FINCA pilot)- All riders trained at SafeBoda Academy
Information analysis & advice	Observed: <ul style="list-style-type: none">- Leverages driving history to offer loan package and asset financing for drivers (FINCA pilot)

Sources:
SafeBoda website,
[FINCA Impact](#), and
FiDA analysis.

Region: Indonesia, Vietnam, Singapore, and Thailand

Core Business: on-demand ridesharing and delivery marketplace

Secondary: services marketplace that connects consumers with e-commerce, billpay, mobile top-up, movie tickets, and beauty and cleaning among other services through the Go-Pay mobile wallet

Market functions Financial & Economic Inclusion Analysis

Sources:

Gojek website, [Tech Wire Asia](#), [Techcrunch Expanded Ramblings](#), [Reuters Online marketplaces.com](#), [Nikkei.com Jakarta Globe.id](#), [Gojek Engineering.com](#) and FiDA analysis.

Aggregation & distribution	<p>Observed:</p> <ul style="list-style-type: none"> - Expand trade rings for drivers beyond their immediate network - Decrease matching friction (and collections friction in some countries) for affordable insurance available for drivers and lending options for vehicle financing and smartphones
Transaction facilitation	<p>Observed:</p> <ul style="list-style-type: none"> - Standardize on-demand ridesharing and meal service delivery - Accepting both cash and GO-PAY allows gradual onboarding to digital wallets
Credibility enhancement	<p>Observed:</p> <ul style="list-style-type: none"> - Enhanced credibility of drivers on platform via independently verified driver's identity documents, driver's license, and other required information
Information analysis & advice	<p>Observed:</p> <ul style="list-style-type: none"> - Integrates their merchant payment data with their services platform for unified customer experience, including cross-promotions, across the platform - Search personalization is automated on the backend for repeat GO-FOOD through their past usage

Platform Profiles

Attention:

Platforms that treat a potential consumer's attention as a resource or asset

Categories profiled include:

- *Social networking*

**These profiles reflect publicly available information from company websites, news articles, and blog posts as of 2018.
Please contact FiDA with any updated company details.*

Bonga (Parent Org.: Safaricom)

Region: Africa, primarily Kenya

Core Business: messaging platform with deep integration to M-Pesa; Bonga Sasa offers messaging and money transfer between individuals; Bonga Baraza (mid-2018) will allow users to collect money for purpose-driven events; Bonga Biashara will build on the use of social networks for commerce by allowing users to create business profiles linked to their personal social media profiles and M-Pesa accounts so they can sell online

Market functions **Financial & Economic Inclusion Analysis**

Sources:

[Techcrunch](#),

[Pymnts](#),

Bonga website, and

FiDA analysis.

Aggregation & distribution	<i>Potential:</i> - Unclear how Bonga Biashara will work; may increase income opportunities by expanding trade rings if functionality similar to Facebook Marketplace
Transaction facilitation	Observed: - Extend reach and reduce payments friction via integration with M-Pesa
Credibility enhancement	<i>Potential:</i> - Satisfy KYC and reduce fraud via certified profiles on platforms
Information analysis & advice	Observed: - Confirm ability to pay via direct visibility to transactions/turnover <i>Potential:</i> - Infer ability to pay based on size and quality of individual's network on the platform

Facebook and Facebook Messenger

Region: global

Core Business: platform connecting people and businesses and enabling them to communicate; recently added store and payments functionality; monetized by advertising, payments revenue from developers, and subscriptions to use Facebook store

Secondary Business: consumer hardware products and technology research and development into augmented reality (Oculus) and artificial intelligence

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution

Observed:

- Decrease matching friction (and collections friction) for small merchant lending (in the US only)
- Expand trade rings geographically for merchants using Marketplace or Facebook Stores

Transaction facilitation

Observed:

- Standardize e-commerce transactions through Facebook Stores

Potential:

- *Extend reach and decrease payments friction via integration with mobile wallets and other payment channels used outside of global north*

Credibility enhancement

Potential:

- *Leverage patent enabling authorizing and authenticating a user based on their social network*

Information analysis & advice

Potential:

- *Leverage patent enabling approval of loans based on a user's social connections*

Sources:
Facebook website
and FiDA analysis.

WeChat (Parent Org.: Tencent Holdings Limited)

Region: primarily in China, but moving global to support Chinese expats and tourists

Core Business: social and communications network and mini-app ecosystem supported by online/offline payments facilitation (WeChat Pay)

Secondary Business: financial services linked to WeChat Pay product, including insurance, business and personal lending, and personal wealth management; recently launched business tools for merchants

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution	<p>Observed:</p> <ul style="list-style-type: none"> - Decrease matching friction (and collections friction) for small and micro business lending, personal microlending, and insurance products - Aggregate micro deposits and small wallet balances into wealth management funds so that all can benefit
Transaction facilitation	<p>Observed:</p> <ul style="list-style-type: none"> - Revolutionize online and offline-to-online commerce through WeChat Pay and Mini-program functionality - Dramatically reduce payments friction through WeChat Pay product
Credibility enhancement	<p>Observed:</p> <ul style="list-style-type: none"> - Verified official accounts
Information analysis & advice	<p>Observed:</p> <ul style="list-style-type: none"> - Leverage WeChat Pay transactional data to approve loans - Third parties have developed “deadbeat maps” of debtors and launched them on WeChat; this has sparked controversy

Platform Profiles

General Recruitment

Edge Cases:

Categories profiled include:

- *General recruitment; platforms in this category match job applicants to employment opportunities that are not online work or gig work*

Dumaworks

Region: Africa, primarily Kenya

Core Business: connects employers and potential hires through a mobile platform that offers algorithmic screening and matching; uses SMS to reach candidates who use SMS as preferred means of communication; markets to MSMEs

Secondary: Purports to start also providing upskilling/certification

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution	Observed: <ul style="list-style-type: none">- Increase income opportunities for workers by expanding job searching beyond immediate network- Decrease slack and matching friction through automated sourcing and screening technologies
Transaction facilitation	<i>Potential:</i> <ul style="list-style-type: none">- Increase visibility to "informal job activity" of MSMEs through platform
Credibility enhancement	<i>Potential:</i> <ul style="list-style-type: none">- Satisfy KYC (particularly employment history) via certified profiles on the platform
Information analysis & advice	None identified

Sources:
[Crunchbase](#) and
FiDA analysis.

Jumia Jobs (Parent Org.: Jumia Technologies)

Region: Africa, with top countries including Uganda, Cameroon, Senegal

Core Business: job website connecting candidates looking for a job and employers recruiting talent; employers pay to: 1) promote ads (boosted ads), 2) access an online database of candidate profiles, 3) prefilter applicants, 4) access headhunters

Market functions Financial & Economic Inclusion Analysis

Sources:
Jumia Jobs website
and FiDA analysis.

Aggregation & distribution	<p>Observed:</p> <ul style="list-style-type: none"> - Increase income opportunities for workers by expanding job searching beyond immediate network - Decrease slack and matching friction through automated sourcing and screening technologies
Transaction facilitation	None identified
Credibility enhancement	<p><i>Potential:</i></p> <ul style="list-style-type: none"> - Satisfy KYC (particularly employment history) via certified profiles on the platform
Information analysis & advice	None identified

BrighterMonday (Parent Org.: One Africa Media)

Core Business: online platform that enables users to find and post job vacancies in East Africa; job seekers and employers pay for various packages (Basic, Silver, Gold, Platinum) to post, track candidates, access CVs, promote, or take advantage of value added services such as screening, head hunting, etc.

Secondary: background employment check; direct recruitment

Market functions Financial & Economic Inclusion Analysis

Aggregation & distribution	<p>Observed:</p> <ul style="list-style-type: none"> - Increase income opportunities for workers by expanding job searching beyond immediate network - Decrease slack and matching friction through value added services that assist with screening, etc.
Transaction facilitation	<p>None identified</p>

4 How to conduct business model analysis using the lens

Guides for replicating business model analysis of digital platforms to uncover economic and financial inclusion opportunities

4 Conducting business model analysis using the lens

Market Function

Questions to Identify Opportunities for Financial & Economic Inclusion

Aggregation & distribution

- How might the platform decrease slack and matching friction? Does the platform enable a company to purchase supplies or employ workforce flexibly (e.g., on demand, in small quantities)? Does the platform aggregate demand or disaggregate chunks of work into smaller tasks? Does the platform offer automatic sourcing or screening, or does it provide resources to assist with this? How might local vs. global competition affect the likelihood of a match?
- How might the platform generate income opportunities for participants? Does it expand trade rings? Does it help merchants and suppliers reach markets overseas? Does it help to expand job searching beyond immediate networks? Does it expand trade rings for workers? Does the information lead to optimization?
- How might the platform facilitate discovery? How do customers find suppliers/merchants/workers/service providers? How are suppliers/merchants/workers/service providers matched with customers? How do suppliers/merchants/workers/service providers promote themselves?
- How might platforms employ network effects to benefit participants? How might platforms employ network effects to benefit participants? How might network effects be affecting competition in this sector?
- How might the platform be gatekeeping individuals or groups? Must participants pay or bid in order to be discovered? How might this affect low-income participants? What are the prerequisites to be able to access information on the platform?
- How might the platform decrease matching friction for complementary financial services, such as health or unemployment insurance, and retirement planning? Is this required by regulation in particular countries—how might this service be integrated to the business model? What is the role for partnerships to deliver these services and what are the tradeoffs for offering this directly?
- How might the platform leverage a distributed network to offer financial services? Does the platform enable participants to do this? What banking functions and other services are offered?
- How might the platform leverage a distributed network to be aggregators or distributors?

4 Conducting business model analysis using the lens

Market Function

Questions to Identify Opportunities for Financial & Economic Inclusion

Transaction facilitation

- How is the platform standardizing transactions? Are transactions more transparent—how? Pricing, etc.? How customizable are transactions?
- How might the platform reduce payments friction and extend reach? Does it support digital transactions? Do bank account or wallet requirements indirectly serve as gatekeeping? Is the platform integrated with mobile money or other digital wallets? Does it offer its own digital wallet or transactional card, or is it affiliated with another financial service provider to offer bank accounts linked to digital wallets? Are the integrated wallets widely held by customers or service providers/merchants? Are there payments intermediaries that can move money between integrated wallets and wallets that might be more widely accepted in country? How much revenue do platforms capture from facilitating transactions? How much revenue do intermediaries capture from moving money between wallets? Does the platform accept cash or make it easier for customers to convert cash to digital that can then be used on the platform?
- Is the platform providing bank accounts or opening bank accounts in order to facilitate their own transactions with participants?
- Does the platform combine offline and online transactions?
- How might the platform be facilitating transactions in a way that increases trust? Can transactions be completed face to face as an option? Do agents facilitate transactions on behalf of customers? Are escrow or on-delivery payment options offered?
- How might the platform be increasing the number of transactions by customers? Does it offer consumer lending or laybuy/layaway?

4 Conducting business model analysis using the lens

Market Function

Questions to Identify Opportunities for Financial & Economic Inclusion

Credibility enhancement

- How might the platform leverage in-person encounters to enhance credibility? Can buyer/seller meet face to face? Is there an agent who acts as a credibility enhancer?
- How might users of the platform be authenticated? Are identities and profiles validated or certified? Is fraud reduced on the platform as a result?
- Are verified or certified identities able to be leveraged for KYC? Is this detail made available to third parties for KYC? How might the platform extend verified identities or credibility ratings to third parties for KYC?
- How might the platform verify or validate claims on quality or performance? Do they have ratings or review systems? How might the platform verify or validate information or claims posted on the platform? Are poor performers removed from the platform?
- How might the platform extend internally developed credibility ratings? Does it make information available to independent third parties? Character references, revenue data, or both?
- How might returns or recourse policies be enhancing the credibility of platform participants?
- Does the platform offer upskilling or training opportunities? Are there skills certifications or other certifications that workers or merchants can use to market themselves?
- Does the platform enhance and enforce copyright protection?
- Do loyalty programs serve to enhance credibility?

4 Conducting business model analysis using the lens

Market Function

Questions to Identify Opportunities for Financial & Economic Inclusion

Information analysis & advice

- How might the platform be credit scoring or conducting underwriting risk analysis based on reviews, patterns, sales histories, GPS, or other data? Does it leverage analysis to offer lending or insurance facilities? What partners deliver these solutions or does the platform host offer these directly? What are the tradeoffs with either approach? Can third parties leverage this information for other non-platform related lending purposes, e.g., mortgages?
- How might the platform be capturing and analyzing information that could be used for customer segmentation?
- How might the platform be analyzing and reporting systems data to government or other institutions? How might the platform leverage transaction data to increase work and output levels counted as “formal” services in the economy? Does it standardize and provide increased visibility to work that would previously have been invisible or categorized as “informal”? How would this additional contribution to GDP affect the outlook of the country’s economy, including interest rates, sovereign debt rating, foreign investment?
- What statistics could it develop that would be of interest?
- How might the platform analyze data events that are captured on the platform and make this information available to those on the platform or third parties? Could it lead to optimization or other effects? What kind of segmentation or macroeconomic statistics could it develop that would be of interest?
- How might the platform be leveraging GPS combined with transaction information? What location-specific reporting could it be providing?
- How might the platform be integrating its own data with other intelligence sourced outside the platform?
- How might the platform be providing analytics for platform participants and linking this to advice and guidance?
- Are analytics used by the platform in real time? For example to reduce fraud?

About

About the partnership

The Mastercard Foundation Partnership for Finance in a Digital Africa (FiDA) aggregates and synthesizes knowledge, conducts research to address key gaps, and identifies implications for the diverse actors working in the digital finance space. In collaboration with [our partners](#), FiDA strives to inform decisions with facts and accelerate meaningful financial inclusion for people across sub-Saharan Africa. Additional information and resources can be found at [financedigitalafrica.org](https://www.financedigitalafrica.org/).
